This Case-Based Section example shows the clock (red arrow) which is the time remaining just for this page. You will advance to the next page automatically at the end of that time period if you do not choose to advance yourself by clicking next at the bottom of the page. The purple arrow points to a typical scroll bar to move up/down a page. The green arrow points to the completion bar so the examinee has a concept of how much of the test has been completed. This bar represents the entire Case-Based section (including the orthopedic and soft tissue units). A similar bar is displayed on the Practical Section. Note, Image 1.1 (orange dashed circles) can only be viewed if clicked, it is not embedded.
This is what is displayed after “Image 1.1” is clicked. The enlarged image will overlay the entire screen until the “X” is clicked (red arrow), to close the overlay and return the examinee to the test page.
In this Case-Based example the examinee has already hit “Next” at the bottom of the page and a pop up box has appeared to confirm that they wish to advance to the next page. Since the examinee cannot go back to a previous page on the Case-Based section this pop up box is extra security so the examinee does not advance accidentally.
To provide notification that time is running out for a specific question (or the entire exam), the banner color under the time clock will change color. For the Case-Based example displayed above the banner under the time clock has turned pink at 30 seconds remaining to complete this page. That will occur on every Case-Based page at 30 seconds.

For the Practical section the banner will turn pink at 20 minutes, and will turn red at 1 minute.
In this Practical section example the red arrow points to the time remaining clock for the entire test time. The green arrow points to the “Flag this page” option, and if clicked will be designated as flagged on the summary page. The dashed orange circle is over a hyperlink that can be clicked to enlarge Image 1.2. The orange arrow points to image 1.2 that in this particular example is also embedded into the test. Some images are not embedded, and just viewed when the hyperlink is clicked (as displayed earlier).
This is what is displayed after “Image 1.2” is clicked. The enlarged image will overlay the entire screen until the “x” is clicked (red arrow), to close the overlay and return the examinee to the test page.
The green arrow points to the navigation buttons at the bottom of each page. This is the last page of the Practical so instead of “Back” / “Next” buttons it lists “Back” / “Review Answers” and if “Review Answers” is clicked the examinee will advance to the Summary Page.
The Summary Review page at the end of the Practical section is displayed. Note the red arrow pointing to Question 1 that was flagged for review later. The green arrow points to the hyperlink “Edit Answers” for Question 1. If this hyperlink is clicked, the examinee will be taken directly back to that specific question.

Note that Question 2 was not flagged but at the bottom of all questions (whether flagged or not) there will be an “Edit Answers” link that the examinee can use to return to any question.
If the examinee chooses to go back to a previous question that was flagged via the hyperlink on the summary page, they will be able to add/change their answers. The navigation button now at the bottom of the page (green arrow) will record the update and return directly to the summary page. To take the “flag” off, it must be clicked at the top of the page before clicking the update button, or the question will remain flagged on the summary page.

Your examination can be submitted regardless of whether questions are flagged or not, so you are not required to take the flag off. It is strictly for your convenience.
To finish the Practical section, click the “Submit” button at the very bottom of the page.
